

THE 24GHZ TRANSMISSION SYSTEM

No Latency . License Free . Clear Frequency Up To 5 Kms

REAL TIME (NO LATENCY) LOW COST EASY INSTALL

The new 24GHz System provides transmission of video and audio within the 24GHz band.

This new frequency is license free in the UK. It is a little used frequency which means little or no low interference. This makes the 24GHz system ideal for securing high risk areas.

Using specific directional antennae leads to a lower interference sensibility and antenna gains are up to 36dB.

Applications of this new system are multifaceted. It can be used for city CCTV, industrial CCTV and larger areas like mountain ranges and large cities. This system has been approved for use by British Airports Authority.

The perfect wave propagation makes this 24GHz system excellent for surveillance of pipes, tunnels, channels and ravines. It is for point to point transmission as well as point to multi-point transmission. It offers 16 addresses and, with increased power, a longer transmission range.

Export versions available with higher power and longer range.

KEY FEATURES:

24GHz with 16 selectable channels

No latency

Point-to-point & Point-to-multipoint transmission

Secure transmission

Uncluttered frequency

Specific directional antennae

Range: Up to 5 KM line of sight; longer range systems available

IP 66 Cabinet Mains - 12V DC Keylock

9-30V DC
