

MOBILE 3G SYSTEM

COMPACT, SIMPLE SET-UP, INSTANT VIDEO TRANSMISSION

The Mobile 3G System is a portable, rapidly deployable, wireless, high-speed camera that is 3G enabled for global coverage with the option of WI-FI facility allowing data download and short range transmission.

This cutting edge technology is embedded with HSUPA with fallback to: HSDPA, UMTS, EDGE, GPRS which means that transmission will be made from best to worst case scenario; this gives ease of operational use.

Easy and quick to install, the 3G LCRDS is pre-configured with fixed IP to enable instant transmission. Lightweight and compact, the moving IR filter allows for use 24 hours a day, for overt or covert use and is rugged and making it suitable for applications such as vehicle surveillance, crowd control, anti social behaviour.
